Accurate and reliable temperature control

Fan-assisted circulation provides even temperature distribution and precise temperature control from 2°C to 14°C. The freezer compartment of model RFS-162-010X uses direct cooling. Double or triple glazed doors coated with a heat reflective film insulates against changes in ambient temperature (the freezer compartment of RFS-162-010X has a solid door). Foamed in place polyurethane insulation ensures temperature stability and reduced energy consumption, whilst automatic cyclical defrosting has minimal impact on the internal temperature.

Sample protection

Straightforward controls and a digital display on all models with clear confirmation of temperature. Extensive alarm systems provide sample protection. High and low temperature safety devices prevent the contents of the refrigerator from freezing or their temperature rising abnormally - an optional temperature recorder provides hard copy of refrigerator performance.

Sliding doors with positive close action (and with lock for sample security) reduce the amount of installation space required and with an internal lamp allow for easy identification of samples. RFS-162-010X features hinged doors and an interior lamp in the refrigerator compartment only. Castors aid installation.

Features fully automatic cyclical defrosting and easy to clean interior surfaces. Access ports allow thermocouples and cables to be fitted.
